A Guide for Students and Parents - ACT

There's a nice approach to this problem that uses vector cross products. Define the 2-dimensional vector cross product $\mathbf{v} \times \mathbf{w}$ to be $v_x w_y - v_y w_x$. Suppose the two line segments run from p to $p + r$ and from q to $q + s$. Then any point on the first line is representable as $p + t r$ (for a scalar parameter t) and any point on the second line as $q + u s$ (for a scalar parameter u).

geometry - How do you detect where two line segments

SAT Practice Test Answer Sheet. Download and print this answer sheet to take the full-length practice test. It will look a little different from the one you'll use when you take the official SAT, but the rules are the same: use a No. 2 pencil, completely fill in circles, and track your place so you won't get tripped up if you skip a question.
