Get Started scripting language. A scripting language is a form of programming language that is usually interpreted rather than compiled. Scripting languages are typically converted into machine code on the fly during runtime by a program called an interpreter.

.Net development information and Visual Basic / VB

In software engineering, multitier architecture (often referred to as n-tier architecture) or multilayered architecture is a client–server architecture in which presentation, application processing, and data management functions are physically separated. The most widespread use of multitier architecture is the three-tier architecture.. N-tier application architecture provides a model by ...

Summary. Diagrams are an essential tool for communicating information architecture and interaction design in Web development teams. This document discusses the considerations in development of such diagrams, outlines a basic symbology for diagramming information architecture and interaction design concepts, and provides guidelines for the use of these elements.

Jesse James Garrett: Visual Vocabulary for Information

In computer programming, an application programming interface (API) is a set of subroutine definitions, communication protocols, and tools for building software. In general terms, it is a set of clearly defined methods of communication among various components. A good API makes it easier to develop a computer program by providing all the building blocks, which are then put together by the ...
